

Cybersecurity & Ethical Hacking

Vulnerability Assessment, Pentesting, OWASP Top 10, Red Teaming & Cloud Security

APPSEC & NETWORK TESTING

1. SQL Injection (SQLi) Audit & Prepared Statements

Detect and remediate classic, blind, and time-based SQLi with secure ORM configurations.

2. Server-Side Request Forgery (SSRF) Hardening

Prevent IMDS metadata exfiltration using DNS validation, private IP blocks, and IMDSv2 enforcement.

3. BOLA / IDOR Authorization Engine

Design Attribute-Based Access Control (ABAC) to verify resource ownership on every API endpoint.

4. Active Directory Kerberoasting Mitigation

Audit SPNs with weak passwords, deploy Group Managed Service Accounts (gMSA), and monitor Event ID 4769.

RED TEAMING & CLOUD DEFENSE

5. Zero-Trust Network Architecture (ZTNA)

Replace perimeter VPNs with identity-aware proxies, device health checks, and micro-segmentation.

6. Kubernetes Admission Webhook Security

Block privileged containers, enforce read-only root filesystems, and detect container breakouts.

7. Ransomware Containment Incident Playbook

Execute network isolation, credential revocation, memory dump forensics, and clean recovery.
