

DevOps & Cloud Prompts

AWS, Kubernetes, Terraform, Docker, CI/CD, Observability & SRE

CLOUD ARCHITECTURE & INFRASTRUCTURE AS CODE

1. Multi-Region Serverless Architecture

Design an Active-Active AWS architecture using Route 53, API Gateway, Lambda, and DynamoDB Global Tables with Terraform.

2. Transit Gateway Hub-and-Spoke Topology

Connect Production, Dev VPCs, and On-Premises data centers via Site-to-Site VPN with explicit route tables.

3. Multi-Stage Distroless Dockerfile

Write a secure container build using distroless bases, non-root users, and optimized layer caching.

4. Kubernetes Pod Anti-Affinity & PDB

Configure high-availability deployments spread across AZs with PodDisruptionBudgets and node affinities.

CI/CD & OBSERVABILITY

5. ArgoCD GitOps & Cluster Bootstrapping

Implement declarative GitOps syncing application repos to Kubernetes with self-healing reconciliation.

6. Distributed Tracing with OpenTelemetry

Set up OTel collectors to export traces and metrics to Jaeger and CloudWatch with W3C context propagation.

7. Production Outage Incident Playbook

Establish Sev-1 triage procedures, automated rollbacks, and blameless post-mortem templates.
